

# Future Scenarios of Decentralised Finance (DeFi)

# My experience, I co-created 3 crypto finance projects

**FI** Network

(ex [factory.co](https://factory.co).protocol  
for crypto bonds)

 **ICONIC HOLDING**

(1st token accelerator in Europe,  
digital asset manager)

**INDEX** Protocol

(protocol for decentralised derivatives)

# Agenda

- DeFi definition & use-cases
- Open vs Closed finance
- Future drivers
- Scenarios

**Definition:** decentralised finance (DeFi) is an **open** financial sector that provides financial services using software that is built on top of **blockchains** in the areas where the traditional financial sector fails.

# The main **use-cases** of (DeFi) sector

trust source in crises

(banking crises, hyperinflation, currency crisis or unexpected devaluations)

tackle global inefficiencies

(2 billion unbaked, expensive cross-border services, sanctions)

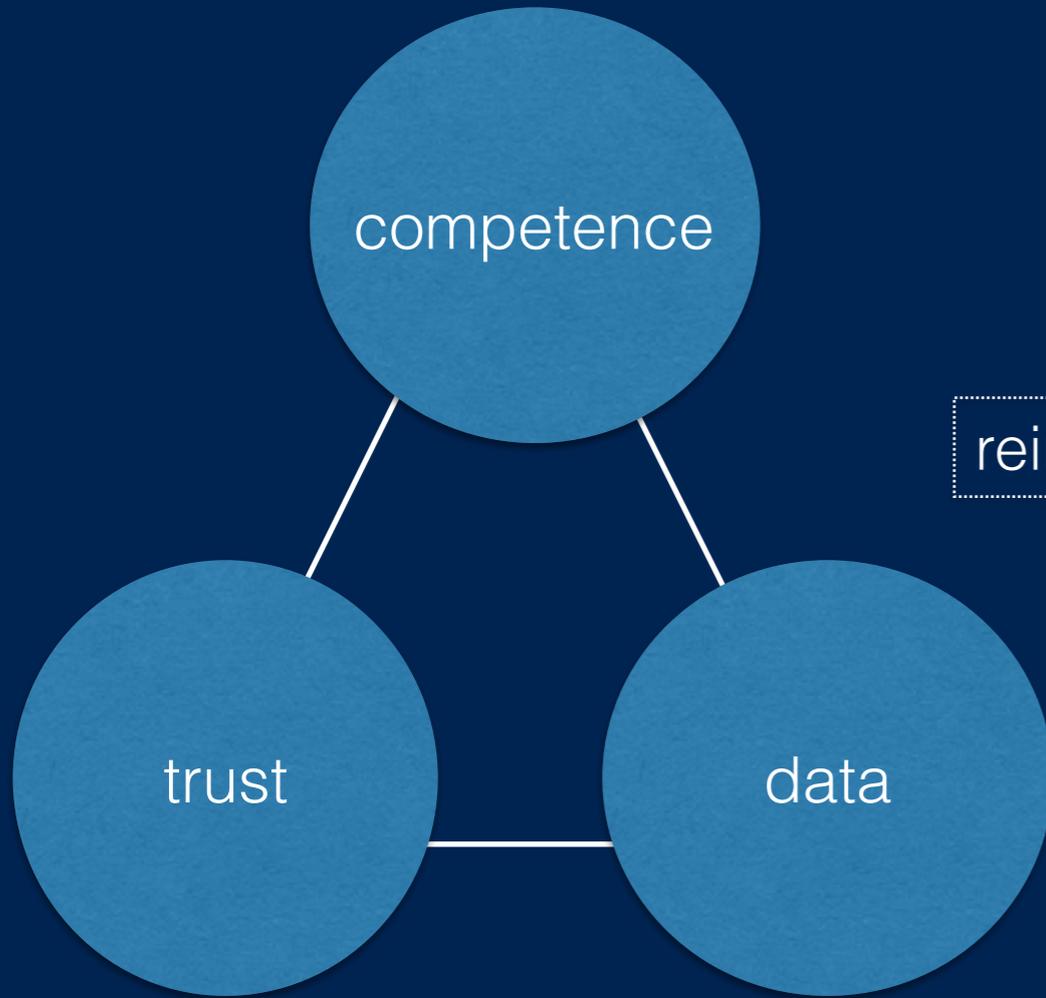

bypass local bans

(e.g. capital outflow and FX controls)

empower creativity

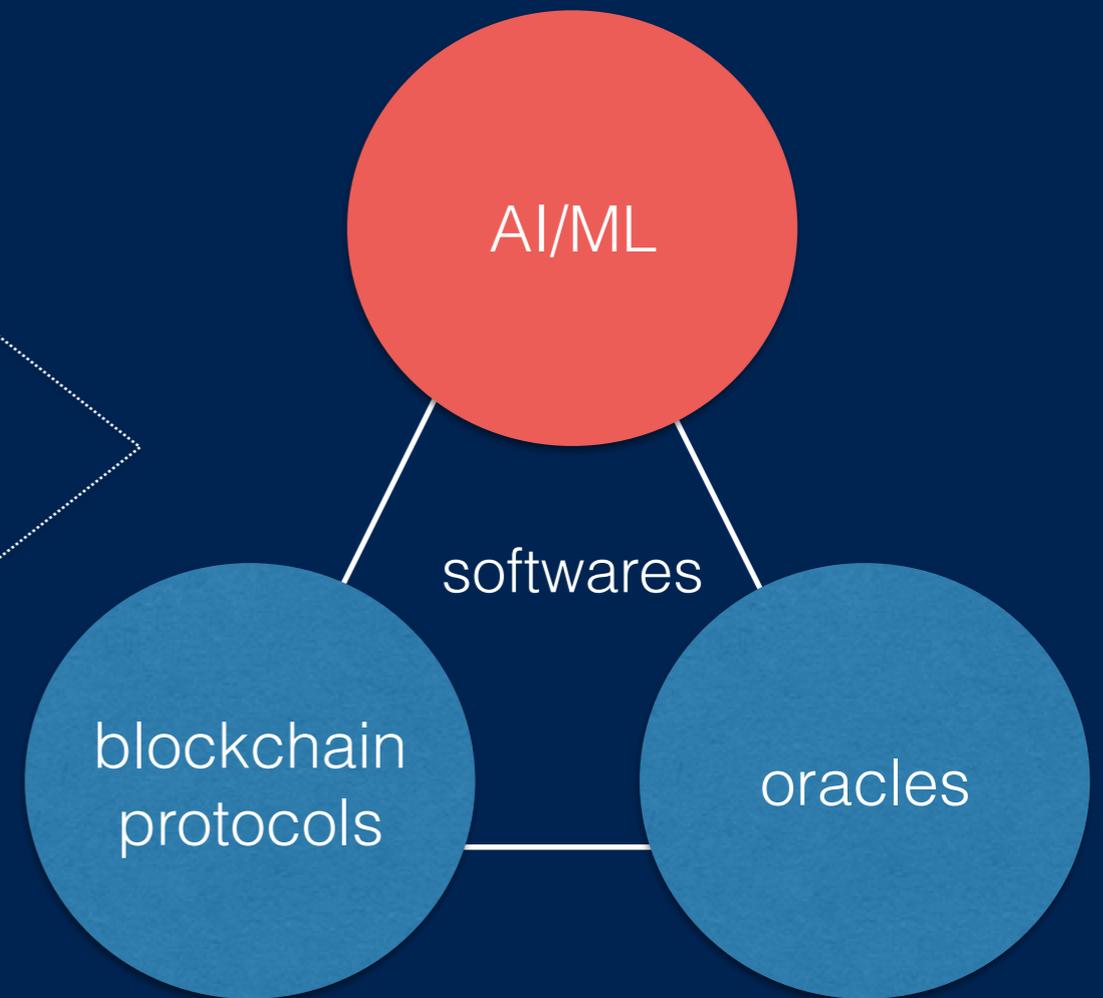

(banking, derivatives, indexes)

# closed finance

institutions, inclusion, closed source

# open finance

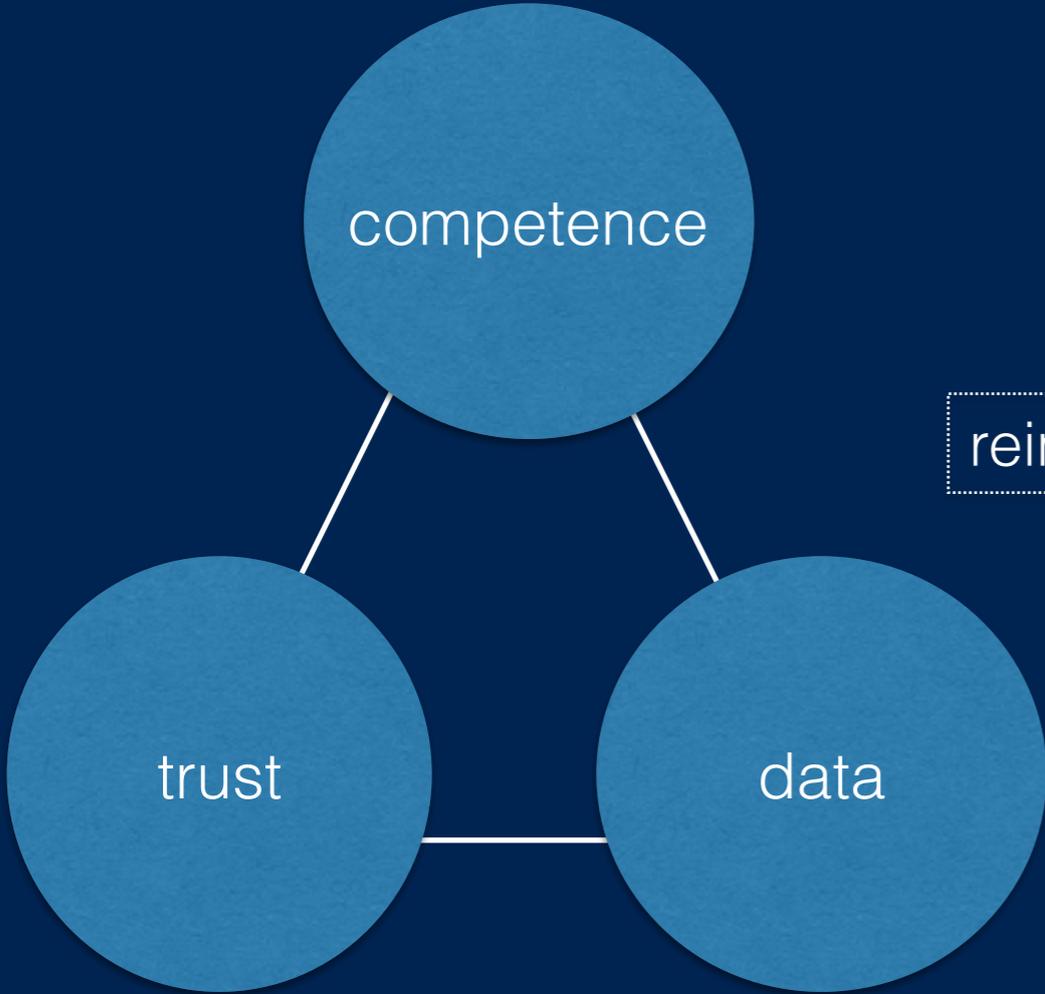

networks, interoperability, open source

re inventing finance

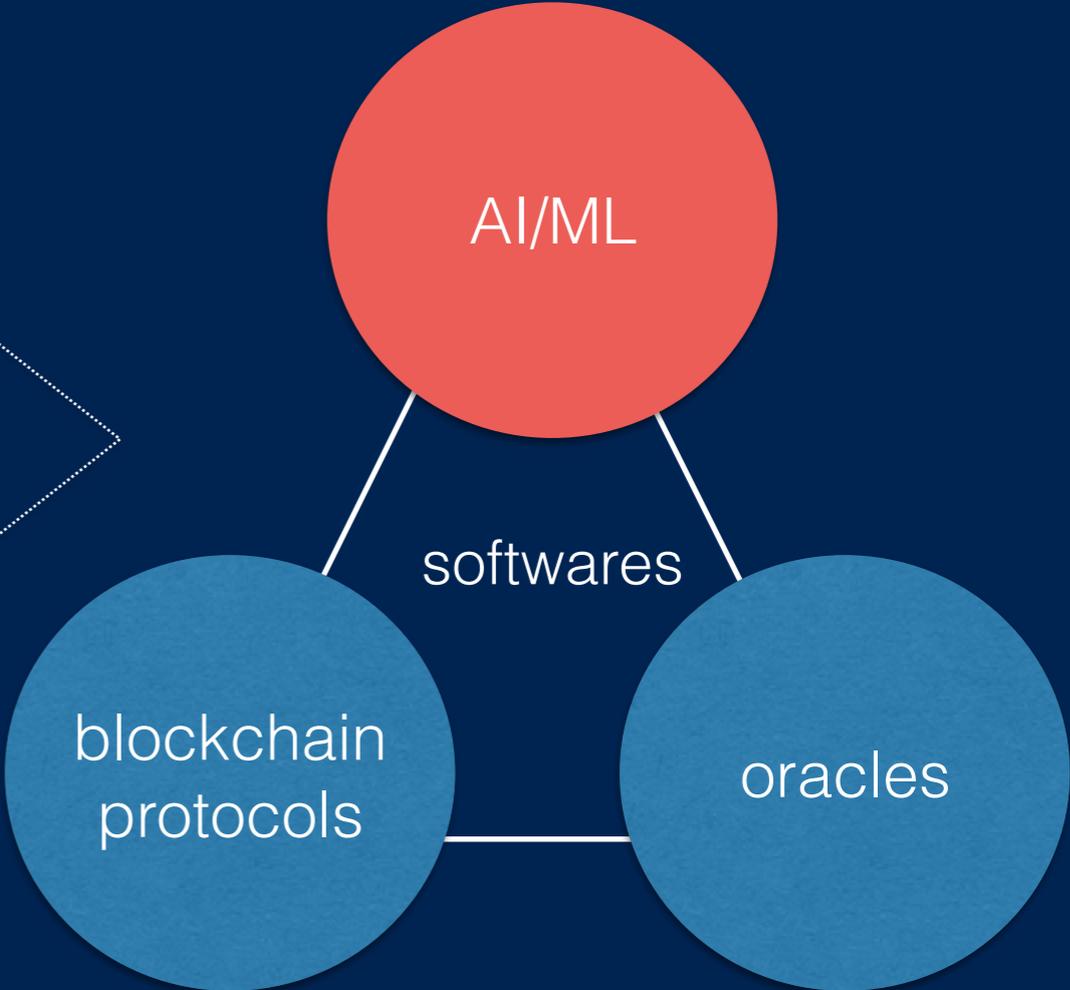

# hedge funds

re inventing finance

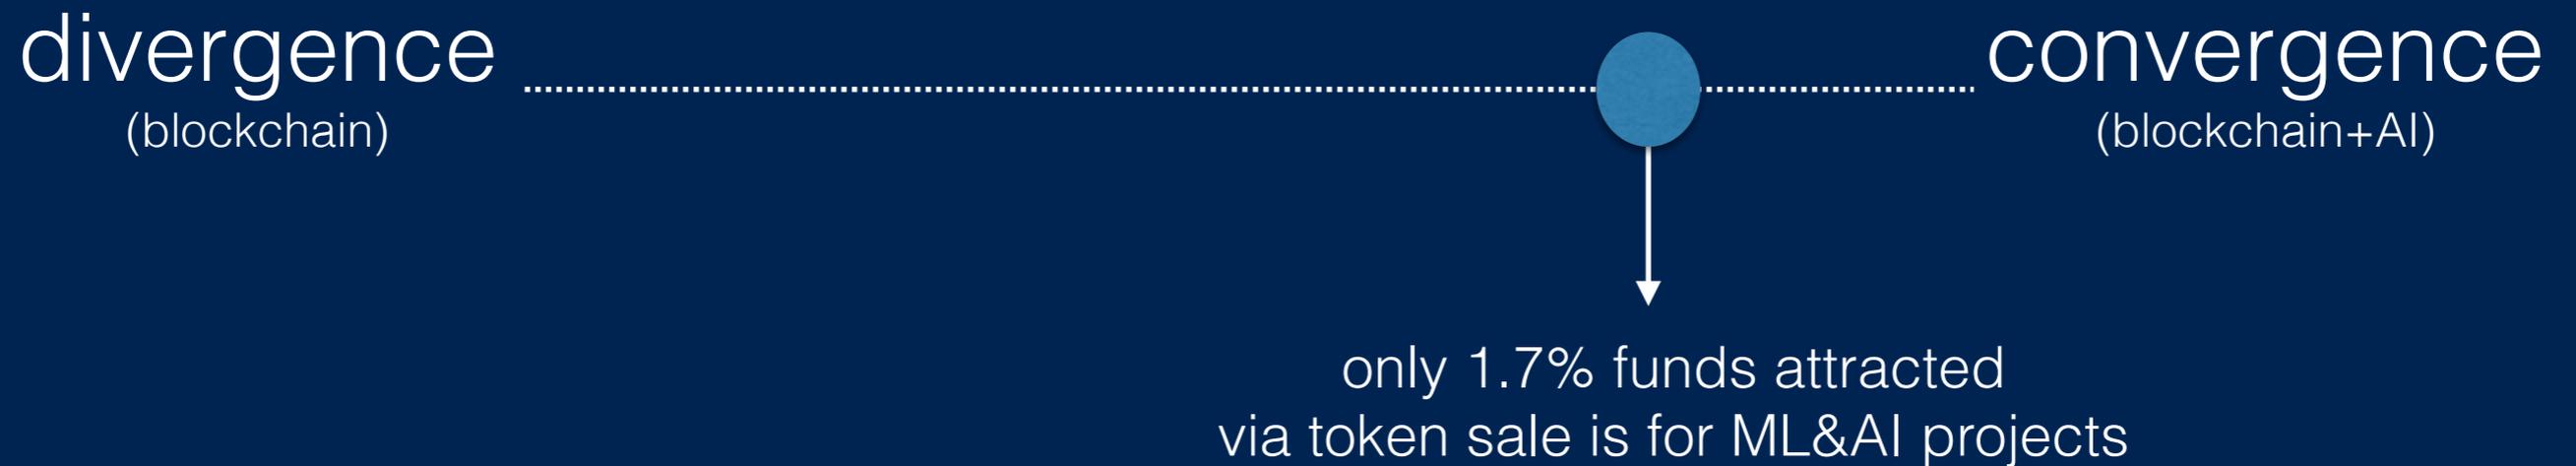

# social trading/ bot marketplaces

institutions, inclusion, closed source

networks, interoperability, open source

# Future driver 1: technological divergence vs convergence

## Future driver 2: global compliance vs innovative evasion

global compliance

(comply with financial authorities)

only 9.8% funds raised through via STOs  
in 1st half 2019.

innovative evasion

(reinventing, fragmenting services)

# Four future scenarios

global compliance  
(comply with financial authorities)

divergence  
(blockchain)

convergence  
(blockchain+AI)

innovative evasion  
(reinventing, fragmenting services)

# Four future scenarios

innovative evasion  
(reinventing, fragmenting services)

Scenario A:  
more efficient &  
interoperable  
networks

Scenarios C:  
emergence of  
financial autonomous  
agents

divergence  
(blockchain)

convergence  
(blockchain+AI)

Scenario B:  
geopolitical wars of  
unicorn coins

Scenarios D:  
market of DeFi robo-  
advisors

global compliance  
(comply with financial authorities)

## Scenario A: more efficient & interoperable networks

Ideology: crypto anarchism  
(blockchains should replace  
institutions)

growth mode: efficiency &  
interoperability

Hot technologies: decentralised  
oracles, lightning, interoperable  
ledgers, etc.

Use-cases: alternative trust  
system, bypass local bans,  
empower oppressed creativity

Winners (losers): public  
protocols (banks, fin-tech)

The image shows the Polkadot logo, which consists of the word "Polkadot" in a black, cursive script font.

## Scenario B: geopolitical wars of unicorn coins

Ideology: pure capitalism  
(privatisation of monetary  
system)

Growth mode:  
legal compliance

Hot technologies: stable coins,  
federated networks

Use-cases:  
global inefficiencies

Winners (losers): unicorns  
(fiat currencies)

 libra

The logo for Libra, consisting of a blue symbol of three wavy lines followed by the word "libra" in a blue sans-serif font.

CBCD

## Scenarios C: emergence of financial autonomous agents

Ideology: techno futurisms  
(technology can do better than  
humans)

Growth mode: creative  
convergence

Hot technologies: federative  
learning, ensemble learning, etc.

Use-cases: alternative  
trust system

Winners (losers): decentralised AI  
apps (institutions)

TBC

Scenarios D:  
market of DeFi robo-advisors

Ideology: humanism (technology should empower humans)

Growth mode: AI/ML adoption

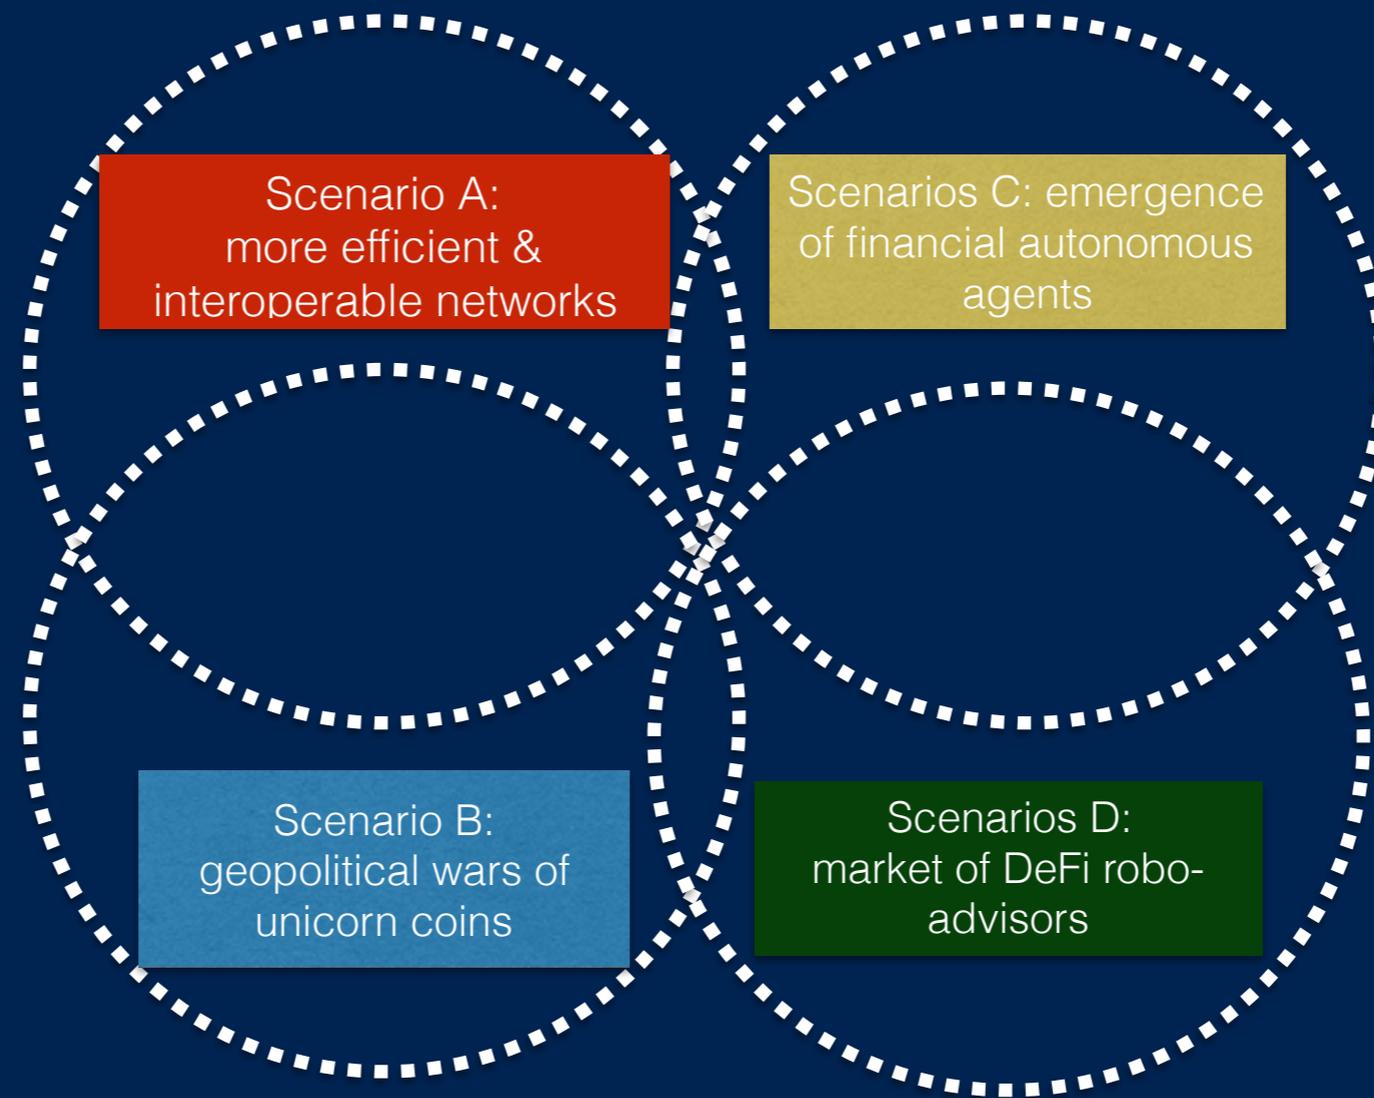

Hot technologies: federative learning, ensemble learning, etc.

Use-cases: support people creativity

Winners (losers): supportive AI apps (institutions)

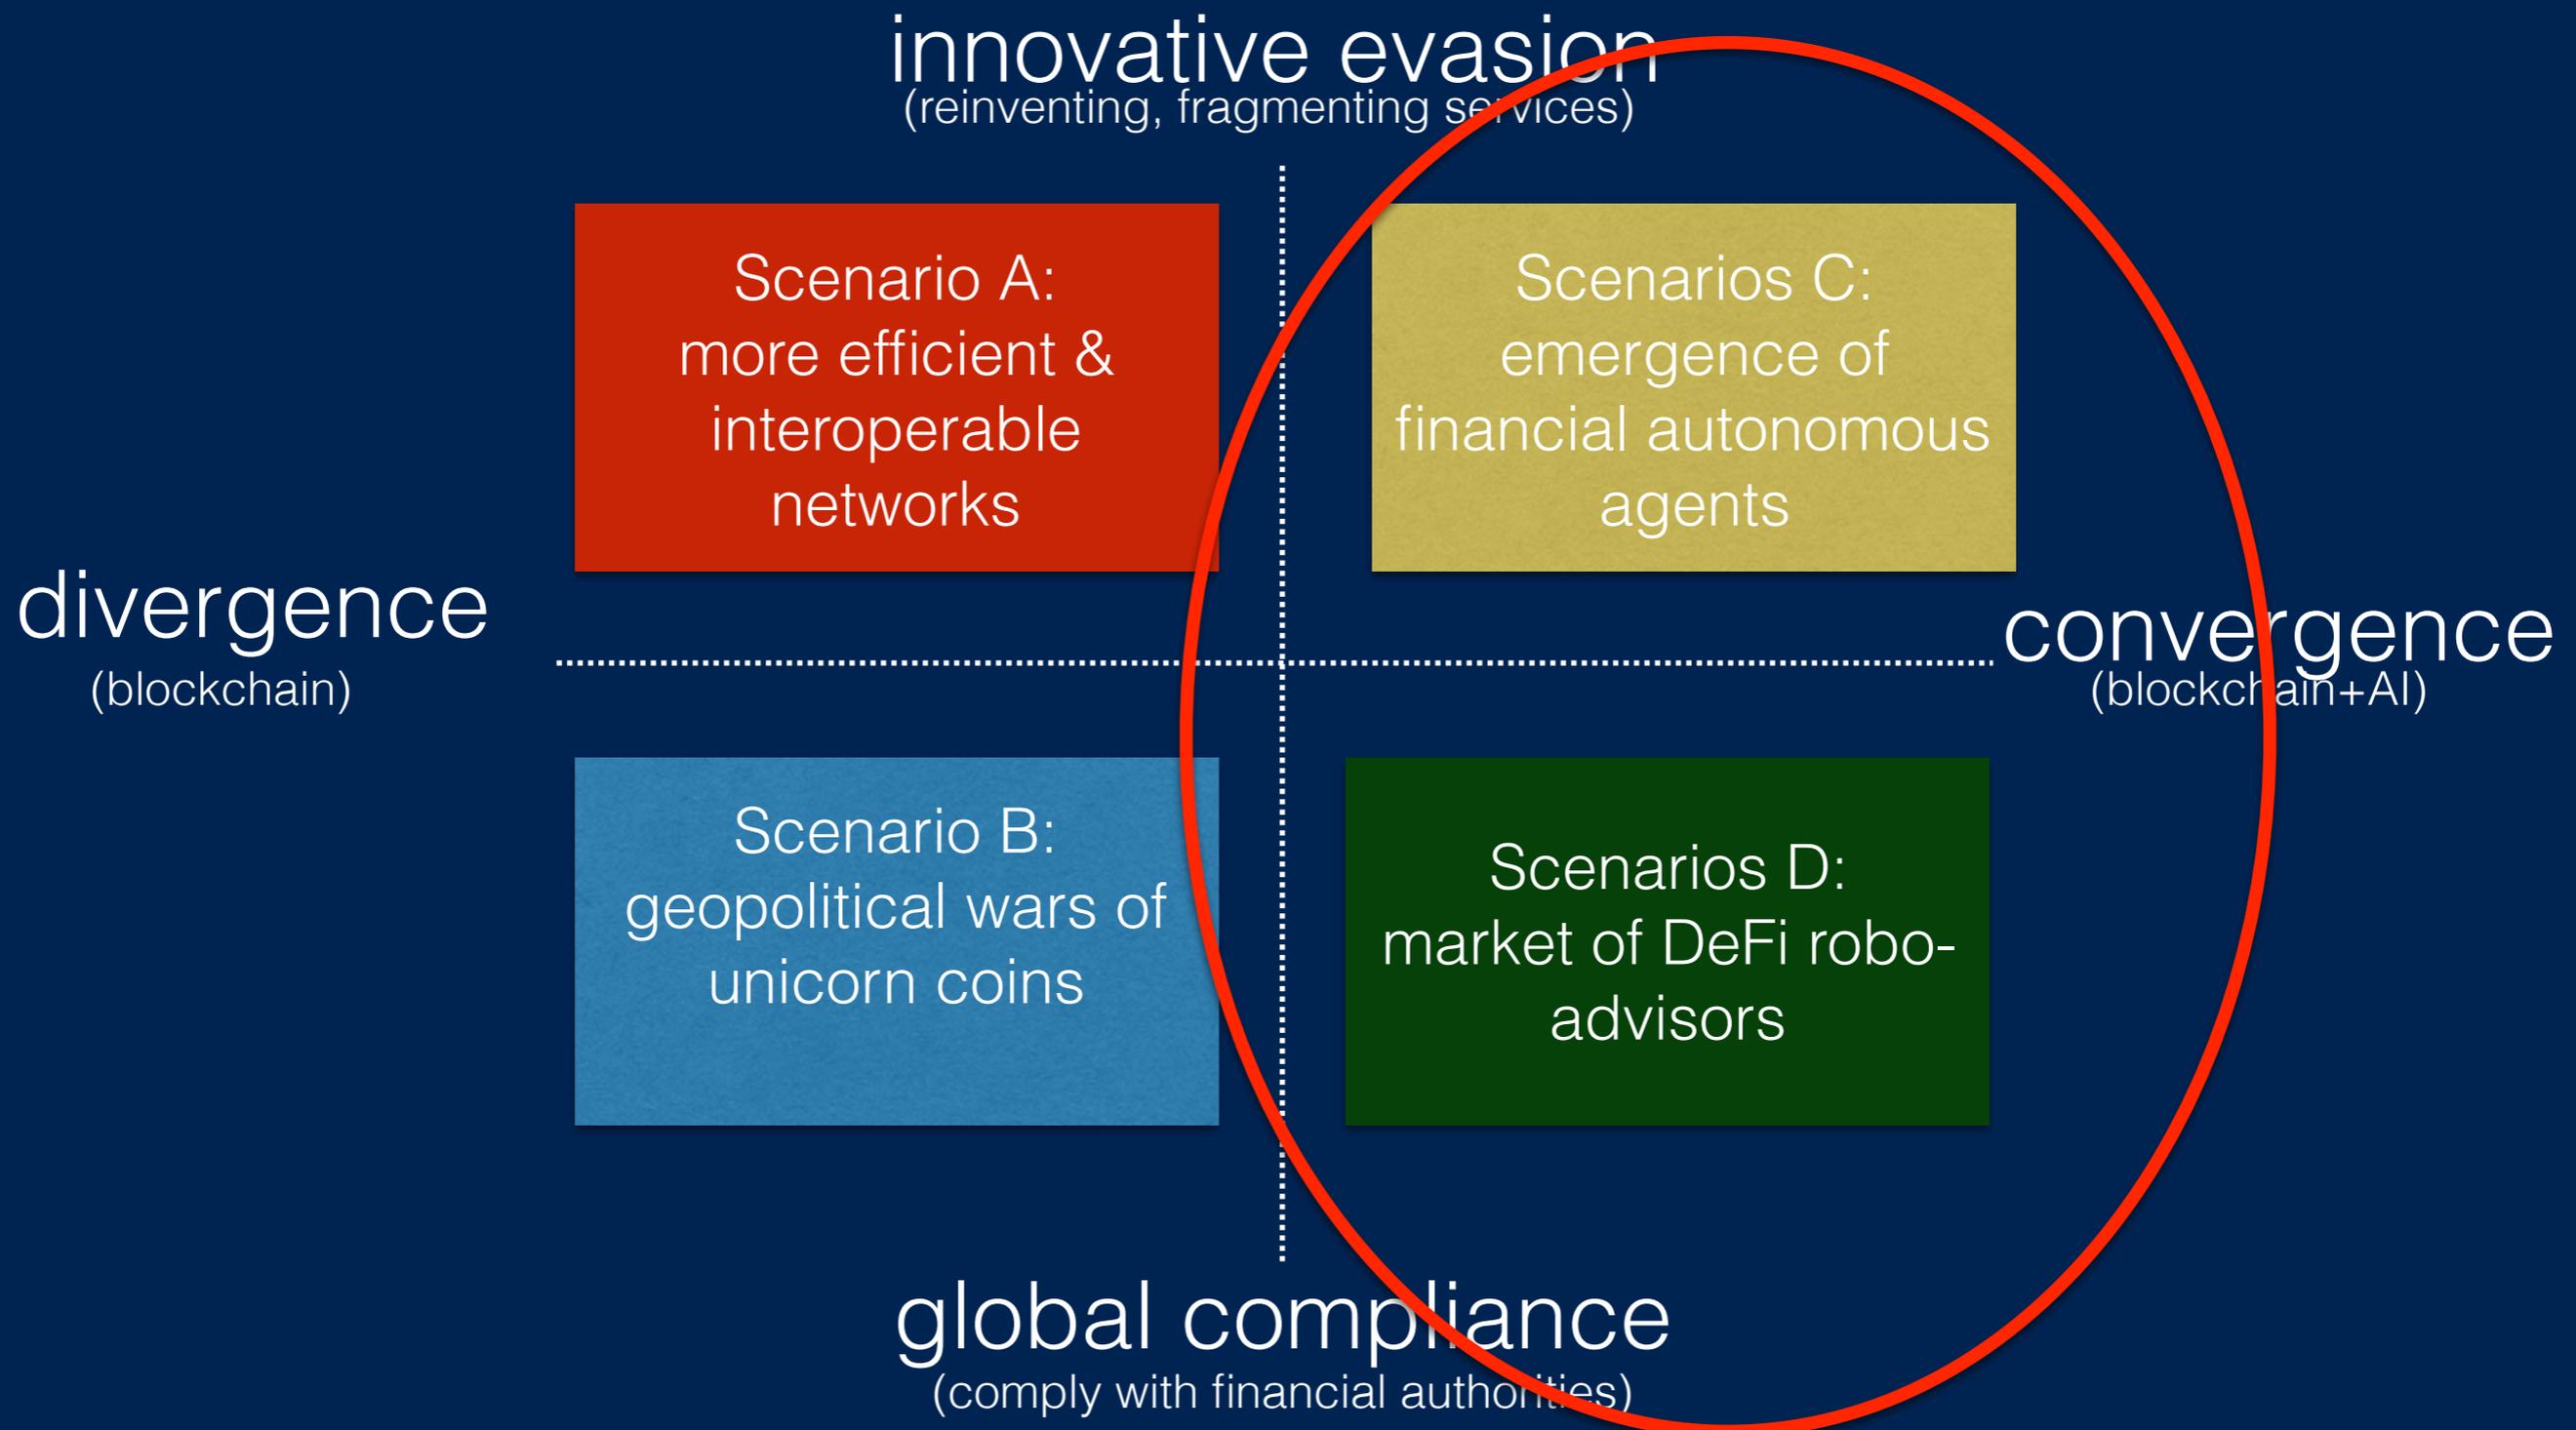

**Futures** are created through scenarios interactions.

I am crypto startup builder, my mission is to put teams and investors into best positions to capitalise emerging opportunities of intersection between cryptos, decentralised finance, and artificial intelligence.

# My focus to build AI/ML layer for crypto finance industry

# Future Scenarios of Decentralised Finance (DeFi)
